SCOPE AI · PROGRESS UPDATE

Sharing the survey safely: access codes, QR codes and the AI trial disclaimer

What has changed since 24 October, plus a step-by-step guide for staff on managing the access code, QR codes and links used to invite people to the survey.

Period covered
24 October – 11 November 2026

AT A GLANCE

The short version

People reach the Scope AI survey by entering an **access code** or by scanning a **QR code**. Until now, that code was fixed in the system and the QR code was shown on the public sign-in page, so anyone who opened that page could scan it. This update gives staff control over who can get in, and makes it clearer to participants that this is an AI trial.

01

You choose the access code

Admins can set their own code, or generate a random one with one click, straight from the dashboard.

02

QR codes live in the dashboard

The QR code is no longer shown on the public sign-in page. Staff generate it in the dashboard and decide where to share it.

03

Download, copy, share

Download a high-quality QR code image for posters and flyers, or copy a direct link for emails and messages.

04

QR code on every survey

Each survey in the Surveys list now has an *Access QR Code* button, so the right link is always one click away.

05

AI trial disclaimer

Before chatting, participants see a clear disclaimer explaining that this is an experimental AI trial, and they confirm they understand.

06

Privacy reminders throughout

A short reminder not to share confidential or personal information appears on the sign-in page, in the welcome message and above the message box.

PART 1 NEW

An access code you control

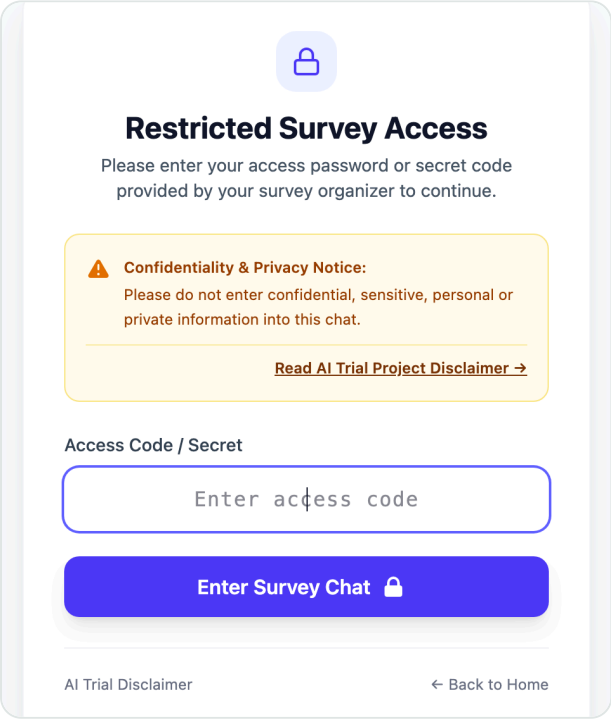

Before this update, every participant used the same built-in code and nobody could change it without a developer. The code now lives on a new dashboard page called **Chat Access & QR Code**, where admins can change it at any time.

- **Set your own code**, such as a memorable word for an event, up to 64 characters.
- **Generate a random code** when you want a fresh, hard-to-guess one, for example after a round of recruitment closes.
- **Change it whenever you need to.** As soon as the new code is saved, the old code, old links and old printed QR codes stop working.

> **One code for every survey.** There is a single access code for the whole Scope AI system, not one per survey or per organisation. Changing it affects every link and QR code currently in circulation, so let colleagues know before you change it.

Why the QR code left the sign-in page

The QR code on the old sign-in page contained the access code itself. Anyone who found that page could scan it and get straight in, which made the code effectively public. The sign-in page now only asks for the code, and QR codes are created inside the dashboard, where only staff can see them.

The redesigned sign-in page. It now shows a privacy notice and a link to the full AI trial disclaimer, and no longer shows a QR code.

What participants see now

- A clear heading, *Restricted Survey Access*, asking for the code given to them by the survey organiser.
- A **Confidentiality & Privacy Notice** before they type anything.
- A link to read the full **AI Trial Project Disclaimer**.
- An *Enter Survey Chat* button that takes them straight into the survey.

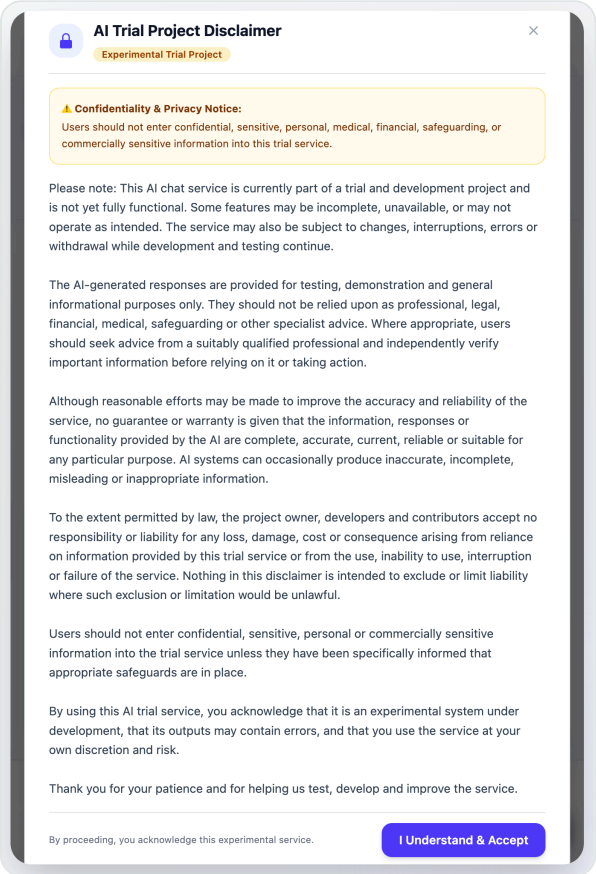

People who arrive through a QR code or direct link skip this screen entirely, because the code is already built into the link.

PART 2 NEW

AI trial disclaimer and privacy reminders

Scope AI is still a trial. To set expectations and protect participants, the survey now makes this clear at every step:

- **A disclaimer before the first message.** When someone opens the survey, a window explains that the service is experimental, that AI answers may contain mistakes and are not professional advice, and that people should not share sensitive information. They press *I Understand & Accept* to continue.
- **A reminder above the message box.** A short privacy line stays visible while people type, with a link to re-read the disclaimer.
- **An updated welcome message.** The assistant's opening message now says this is an AI trial and asks people not to share confidential or private information.
- **Always available.** A padlock button at the top of the chat reopens the disclaimer at any time.

The disclaimer shown when a participant opens the survey. They accept it once per visit.

Staff can edit the wording. The disclaimer title, the full disclaimer text and the short privacy reminder can all be edited from the dashboard, with no developer needed. The default text comes from the approved *AI Trial Project Disclaimer* document.

You can switch the pop-up off. If you'd rather the disclaimer didn't appear automatically, turn off **Require disclaimer acknowledgment**. The privacy reminder and the padlock button stay in place either way.

PART 3 HOW-TO GUIDE

Managing the access code

Only **Super Admins** and **Organisation Admins** can change the access code or the disclaimer. See "Who can do what" on the last page.

Find the page

1. Log in to the Scope AI admin dashboard.
2. In the left-hand menu, click **Chat Access & QR Code** (the key icon).

The page has three sections: **Survey Access Security & Password**, **Survey Access QR Code & Direct Sharing** and **AI Trial Disclaimer & In-Chat Privacy Notice**.

Option A: Set a code you choose

1. In **Chat Access Password / Secret**, type the new code. Codes are case-sensitive, so *Raft2026* and *raft2026* are different codes.
2. Click **Save** at the bottom of the page. The new code takes effect immediately.

Option B: Generate a random code

- **Sparkle icon inside the field.** This fills in a random 10-character code, which you can review before you click **Save**. Nothing changes until you save.
- **Generate Random Secret button** at the top right of the page. After you confirm, it **creates and saves a new code straight away**. A notice shows the new code so you can note it down.

Checklist for changing the code

> **Remember:** any QR code or link you have already shared, printed or emailed stops working the moment a new code is saved.

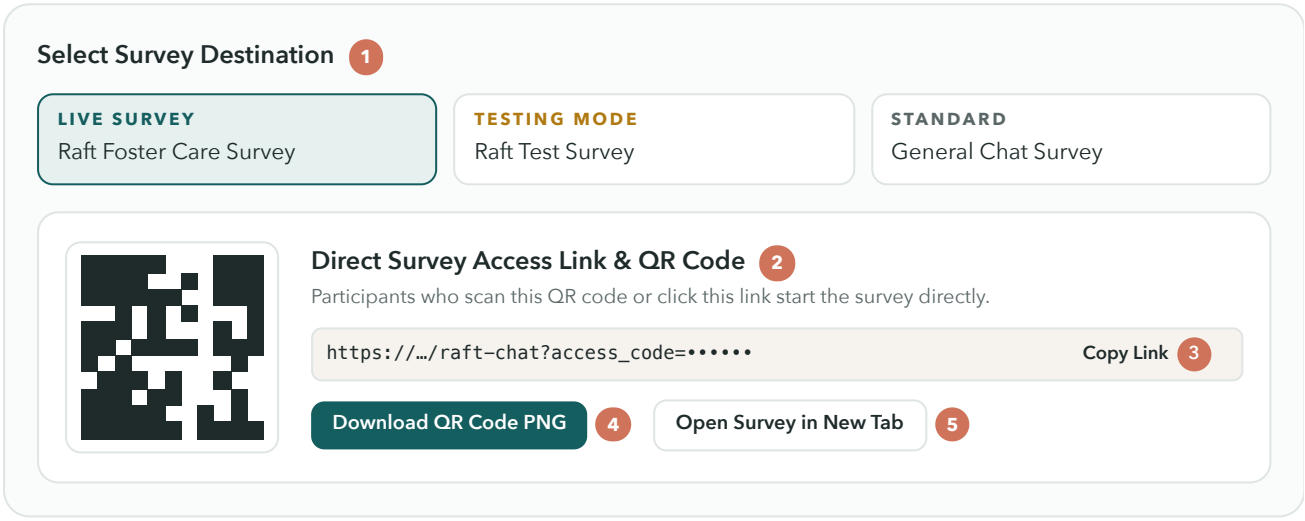

- [ ] Tell colleagues who are sharing the survey that the code is about to change.
- [ ] Note where the current QR code is printed (posters, flyers, slides) so you can replace them.
- [ ] After saving, download fresh QR codes and copy fresh links (see the next page).
- [ ] Scan the new QR code with your own phone to confirm it opens the survey.
- [ ] If the system still uses the original default code (*123456*), replace it with your own before inviting participants.

PART 3 HOW-TO GUIDE

Sharing a QR code or link

A QR code or direct link has the access code built in, so participants go straight into the survey without typing anything. There are three ways to open the sharing panel:

- The **Share QR Code** button at the top right of the **Chat Access & QR Code** page.
- The **Survey Access QR Code & Direct Sharing** section further down the same page.
- The **Access QR Code** button on any row of the **Surveys** list. For the Raft test survey, the test version is selected for you.

Simplified illustration of the sharing panel.

1. **Choose the destination.** The QR code and link update instantly to match.
2. **QR code preview.** Scan it with your phone to check it works.
3. **Copy Link** copies the direct link for emails, texts, WhatsApp or newsletters.
4. **Download QR Code PNG** saves a high-quality image (600 × 600 pixels) for printing or slides.
5. **Open Survey in New Tab** lets you try the survey exactly as a participant would.

Which destination should I pick?

Destination	Use it for
Raft Foster Care Survey Live Survey	Real participants. Answers are recorded as genuine survey responses.
Raft Test Survey Testing Mode	Staff trying the survey, demos and training, so test answers stay separate from real responses.
General Chat Survey Standard	The original general mental-health awareness chat. Use it only if you have been asked to.

PART 3 HOW-TO GUIDE

Good practice when sharing

Channel	Recommended approach
Email & messages	Use **Copy Link** and paste it into your message. Add one line explaining what the survey is for and that answers are anonymous.
Posters & flyers	Use **Download QR Code PNG**. Print the code at least 3 cm wide, with a plain white border around it. Scan a printed copy before printing in bulk.
Presentations	Put the downloaded QR image on a slide and leave it up long enough for people to scan.
In person	Tell people the access code and ask them to type it on the sign-in page, or show the QR code on a phone or tablet.

> **Treat links and QR codes like a password.** Anyone who has the link or QR code can open the survey until the code is changed. Share them with the people you want to hear from, rather than on public websites or social media, unless open access is what you intend.

The participant's journey

1
Scan or click
The QR code or link opens the survey directly.

2
Read the disclaimer
They see the AI trial disclaimer and press *I Understand & Accept*.

3
Start chatting
The welcome message repeats the privacy reminder before the first question.

4
Reminder stays visible
A short privacy line sits above the message box throughout.

People who don't have a link can go to the sign-in page and type the code. They then follow steps 2 to 4.

Editing the disclaimer and privacy reminder

1. On the **Chat Access & QR Code** page, scroll to **AI Trial Disclaimer & In-Chat Privacy Notice**.
2. Edit the **In-Chat Privacy Notice** (one short sentence, up to 255 characters), the **Disclaimer Modal Title** or the **Disclaimer Content**. Leave a blank line between paragraphs.
3. Use the **Require disclaimer acknowledgment** switch to choose whether the disclaimer pops up automatically.
4. Click **Save**. Changes appear for new visitors straight away.

PART 3 HOW-TO GUIDE

Common questions

A participant says the QR code on our poster no longer works.

The access code has probably been changed since the poster was printed. Download a new QR code from the dashboard and replace the poster. Meanwhile, the participant can type the current code on the sign-in page.

Someone typed the code but was told it was wrong.

Check the exact spelling, including capital letters. Codes are case-sensitive. If in doubt, open the **Chat Access & QR Code** page to see the current code.

I generated a random code with the sparkle icon, but the old code still works.

The sparkle icon only fills in the field. Click **Save** to make the new code active. The **Generate Random Secret** button at the top of the page, by contrast, saves the new code immediately.

The "Download QR Code PNG" button shows an error.

QR images are created by an online QR service, which may occasionally be slow or unavailable. Wait a minute and try again. As a fallback, use **Copy Link** and share the link instead.

Do participants have to accept the disclaimer every time?

They accept it once per visit. If they close the browser and come back later, they will see it again. They can re-read it at any time using the padlock button or the *Disclaimer* link above the message box.

Can each organisation have its own access code?

Not yet. There is currently one access code for the whole system, so a change made by any admin applies to every survey. Agree between organisations before changing it.

Where should staff test the survey?

Choose **Raft Test Survey (Testing Mode)** when creating the link or QR code, so test conversations don't mix with real responses.

Who can do what

Who	What they can do
Super Admin The Scope AI team	Everything on the **Chat Access & QR Code** page: change the code, edit the disclaimer and share QR codes.
Organisation Admin e.g. a Raft manager	Everything on the **Chat Access & QR Code** page, the same as a Super Admin.
Organisation Member e.g. a Raft staff member	Cannot open the settings page. Can open and download a survey's QR code with the **Access QR Code** button in the Surveys list.
