

Client Progress Report – Recent System Enhancements

Date: August 10, 2026

Project: Scope AI (Raft Mental Health & Survey Platform)

Status: Completed & Tested

Executive Summary

Over the past few days, significant feature enhancements and system upgrades were implemented across the platform. The primary focus of these updates was enhancing participant safety, improving AI accuracy with official documentation, and polishing the user chat interface for a smoother user experience.

Key highlights include:

1. **Automated Safeguarding & Risk Flagging:** Real-time risk detection in survey responses with immediate email alerts sent to safeguarding leads.
 2. **AI Policy Integration (Smart Knowledge Base):** Direct integration of core governance and strategy documents into the AI system for accurate, policy-grounded responses.
 3. **Upgraded Chat & Form Interface:** Modernized input controls featuring auto-expanding text fields, multi-line support, and standard keyboard shortcuts.
 4. **Flexible Survey Navigation:** Added logic enabling participants to skip optional survey sections smoothly.
 5. **Administrative Tools & Data Export:** Enhanced dashboard views for monitoring risk flags and exporting session reports.
-

Detailed Breakdown of Deliverables

1. Automated Safeguarding & Risk Alert System

- **Automatic Risk Detection:** Built an automated analysis layer that inspects participant survey responses for key phrases or indicators of distress and safeguarding concerns.
- **Instant Email Notifications:** Configured immediate email alerts to be delivered to designated safeguarding officers whenever a response is flagged as high-risk.
- **Admin Portal Visibility:** Updated the administrative dashboard (Filament) so reviewers can filter, inspect, and manage flagged sessions along with their audit logs.
- **Session Data Export:** Enabled exporting of survey session data and risk flags into spreadsheet format for auditing and record-keeping.

2. Intelligent Document Retrieval & AI Grounding (RAG Pipeline)

- **Policy Document Ingestion:** Digitized and structured official organizational documentation, including:
 - *Constitution of The Raft*
 - *Raft Strategy*

- *Safeguarding Policy*

- **Vector Knowledge Base:** Integrated a searchable vector database that indexes policy documents for instant retrieval.
- **Context-Aware AI Responses:** When users interact with the assistant or complete surveys, the AI references official policies to ensure advice and answers remain strictly aligned with organizational standards.
- **Automated Knowledge Refresh:** Implemented a single command allowing administrators to re-index documents whenever policies are updated.

3. User Interface & Chat Input Upgrades

- **Auto-Expanding Input Boxes:** Replaced basic single-line input boxes with dynamic, auto-resizing text areas that adapt seamlessly as users type longer responses.
- **Intuitive Keyboard Shortcuts:** Integrated user-friendly keyboard commands:
 - **Enter:** Send message / submit response
 - **Shift + Enter:** Insert line break for multi-paragraph answers
- **Smooth Session Controls:** Enhanced the chat UI to handle session state transitions, active prompt displays, and historical message loading without page reloads.

4. Flexible Survey Logic & Flow Enhancements

- **Smart Skip Logic:** Added the ability for participants to skip optional questions or survey phases without interrupting their session progress or corrupting saved data.
- **Survey Lifecycle Tracking:** Improved state management to ensure user responses are captured accurately across every step of the survey lifecycle.

5. Quality Assurance & System Maintenance

- **Automated Test Suite:** Created comprehensive automated tests covering risk detection triggers, policy retrieval performance, and UI chat actions.
- **Performance & Asset Updates:** Updated system dependencies and compiled optimized styling assets for fast load times.

Summary of Client Benefits

Feature Area	Key Benefit
Participant Safety	Real-time flagging ensures high-risk responses receive immediate attention from safeguarding leads.
User Experience	Multi-line text boxes and keyboard shortcuts make typing detailed responses effortless.
AI Reliability	Grounding the AI in official policy documents guarantees reliable, consistent, and policy-compliant guidance.
Administrative Control	Filterable flags and export functions streamline supervisory review and record-keeping.

Next Steps & Recommendations

1. **Safeguarding Email Verification:** Confirm recipient email addresses for safeguarding alert notifications in the production configuration.
2. **Policy Document Maintenance:** Keep the docs directory updated whenever organizational guidelines or survey questions evolve.
